

Calibrated words vs feeltrace at interview markers (all participants)

Box plot of aggregated feeltrace around (0.5s before 0.5s after) interview markers that mentioned calibrated words and their synonyms. The calibrated value of the words are shown in grey line. The max and min of feeltrace are normalized to (a) [-10 10]; (b) the max and min value of calibrated word mentioned in the interview; (c) the max and min value of all calibrated words by this participant
